

UNITY IS STRENGTH

Incomparable style and cutting-edge technology featured by the new bonded fabrics by Carvico. Four fabrics sharing the same passion for life and extreme challenges which are versatile, comfortable, dynamic and very different:

CORTINA

Compact and delicate on the skin, it boasts a double personality: soft and warm on one side, thanks to its soft brushing which works as an efficient thermal insulation system, and waterproof and windproof on the other for defending the body from humidity and bad weather thanks to its exclusive membrane. Ideal for the production of techno-jackets and outerwear garments.

EVEREST

An “energetic” fabric which offers absolute comfort and a perfect fit. Similarly to Everest it has got two different “faces”: soft, warm and brushed on one side, waterproof on the other. Also in this case, the fabric offers an efficient protection against wind thanks to the inner membrane. Ideal for the production of techno-jackets to be worn to face even the harshest weather conditions.

TOKYO

Trendy and compact, Tokyo embraces the body and perfectly fits the silhouette ensuring maximum comfort and freedom of movement. It is ideal for the creation of lightweight, high performance and stylish jackets.

DUBAI

It is an innovative fabric with an exclusive scuba effect. The latest addition to the family, it boasts a contemporary and stylish look, perfect for extreme sports. But it also ensures comfort, a perfect fit and duration.

Indestructible, like all bonded fabrics by Carvico.
