

VITA, A FABRIC TO BE TRIED ON YOUR SKIN!

Unbeatable for swimwear, incomparable for beachwear, strong when needed, elegant when you want it to be so ... and it is made of 100% recycled materials!

Vita is Carvico crown jewel for various reasons: it is versatile, iper-resistant, thin, stylish, elastic, soft and eco-friendly. Indeed, it is made of 78% of Econyl® polyamide which is derived from 100% recycled material. And this hasn't meant compromising over techno-features, though! Vita is ideal for the creation of high performance sportswear items since its green soul perfectly matches its high tech spirit thanks to the LYCRA® XTRA LIFE™ fiber.

This fabric is non see-through and breathable, boasts an exceptional modulus and is highly stretch, therefore ensuring an optimal shape recovery, maximum comfort and a perfect fit. Moreover, Vita is highly resistant to pilling and abrasions and UV protective (UPF 50+), it offers the perfect muscular compression so to decrease lactic acid and boost the energy recovery process and ensure absolute freedom of movement.

We are talking about a rare mix of key features all gathered in the same fabric which is also thinner than classic charmeuse fabrics (20% thinner), smooth and soft thanks to the use of a multi-filament polyamide yarn.

In addition to all of the above, Vita features a wide color card comprising many classic sportswear shades and several trendy nuances selected for the 2016 season. And we can't forget its recycled polyester version, named "**Vita PL**", derived from PET bottles, which is perfect for printing and available in various neon colors with excellent fastness values.

Vita has a "double personality", and can be used to create comfortable and fashionable beachwear garments or more dynamic and sporty outfits designed to perform at their best during high-impact sport activity inside and outside the swimming-pool.
